## INTEGRATED PEST MANAGEMENT AT SCHOOLS

## **CONDUCIVE CONDITIONS**

Broken irrigation lines provide water sources for pests.

Weeds, like clover, encourage gopher infestations on turf.

Tree limbs touching the roof grant pests access to buildings.

Open dumpsters provide food for pests.

Cracks in pavement create habitats for weeds.

Dense vegetation growing close to buildings provide shelter for pests.

Access to sugary beverages attract paper wasps.

Garbage littered around schools provide food for pests.

## INTEGRATED PEST MANAGEMENT AT SCHOOLS

## **IPM SOLUTIONS**

Trap ground squirrels and fix irrigation leaks to eliminate water sources for pests.

Trap gophers and practice good lawn care to reduce weed invasion.

Trim back tree limbs to prevent pests from accessing the roof.

Place dumpsters at least 50ft away from buildings and cover with tightfitting lids to block pests access.

Trap commensal rodents and trim back dense vegetation to reduce pests habitat.

Use lure traps to capture wasps and clean-up sugary beverage spills to avoid attracting pests.

Apply baits to reduce ant population size and clean-up garbage to eliminate food sources.
